

RCA-27

DETECTOR, AMPLIFIER

The 27 is a three-electrode general purpose tube of the heater-cathode type for use as an amplifier and detector in a-c receivers.

CHARACTERISTICS

HEATER VOLTAGE (A. C. or D. C.)				2.5	Volts
HEATER CURRENT				1.75	Amperes
PLATE VOLTAGE*	90	135	180	250	Volts
GRID VOLTAGE†	-6	-9	-13.5	-21	Volts
PLATE CURRENT			5.0	5.2	Milliamperes
PLATE RESISTANCE	11000	9000	9000	9250	Ohms
AMPLIFICATION FACTOR	9	9	9	9	
Transconductance	820	1000	1000	975	Micromhos
GRID-PLATE CAPACITANCE				3.3	μμf
GRID-CATHODE CAPACITANCE.				3.1	μμf
PLATE-CATHODE CAPACITANCE				2.3	μμf
BULB					ST-12
Base					Small 5-Pin

Maximum plate voltage = 275 volts.

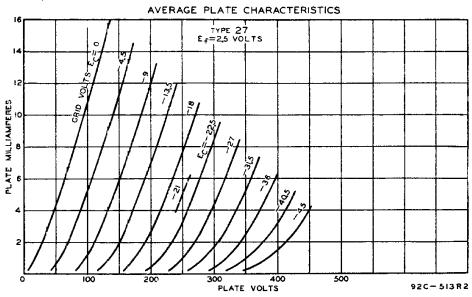

INSTALLATION AND APPLICATION

The base pins of the 27 fit the standard five-contact socket. The socket may be installed to hold the tube in any position.

For heater operation and cathode connection, refer to type 2A5.

As an amplifier, the 27 is applicable to the audio or the radio-frequency stages of a receiver. Recommended plate and grid voltages are shown under CHARACTERISTICS.

As a detector, the 27 may be operated either with grid leak and condenser or with grid bias. The plate voltage for grid leak and condenser detection is 45 volts. A grid leak of from 1 to 5 megohms used with a grid condenser of 0.00025 μ f is suitable. For grid-bias detection, a plate voltage of 275 volts or less may be used. The corresponding grid bias should be adjusted so that the plate current, when no signal is being received, is approximately 0.2 milliampere. For the condition of 250 volts on plate and transformer coupling, the grid bias will be approximately -30 volts.

[†] Maximum value of d-c resistance in grid circuit is 1.0 megohm.
